USER'S MANUAL

PD405-DMX-24DC

User's Manual - Page 1

PD405-DMX unit includes a **PP405-DMX** open frame module mounted inside an aluminum enclosure with 2 RJ45 connectors for control DATA input and output.

The technical descriptions and wiring diagrams are the same as the PP405-DMX except for the control DATA connections.

GENERAL DESCRIPTION

The **PP405-DMX** is a 4-channel DMX-512 compatible dimmer pack. It is equivalent to four solid-state relays (SSR's) and a DMX512 Logic assembled on a single circuit board. Power is fed to the **PP405-DMX** from **FOUR 5 Amps. DC** Voltage Power Supplies . Each solid state relay is rated for a maximum output current of **5 amperes**. The **PP405-DMX** has an open frame U shaped enclosure . The logic signals are optically-isolated from all line voltage elements. An external step-down The DMX-512 control cable is hardwired to the **PP405-DMX.** Several Dimmer packs may be daisy-chained together. Each **PP405-DMX** may be easily set to a unique address with 2 hexadecimal selectors and will occupy the next four DMX control channels beginning with the one following the address selected. When two or more units are set to the same address, their respective outputs work in unison, increasing the amount of load that can be controlled by a single DMX channel. Each of the **PP405-DMX** outputs may be independently configured not to dim. In such case, a DMX input value greater than 3 switches its respective output to 100%, else the output remains at 0%.

DIMMING/SWITCHING - (See Page 10 for more information)

A **PP405-DMX** may control a combination of dimmed and switched loads. Each of the **PP405-DMX's** outputs may be independently configured not to dim. This is achieved using a HARDWARE lock (Jumper)to ensure circuits do not dim. Please see <u>Page 7</u> for location of these jumpers.

Enclosure Installation

Surface mount the dimmer pack in a well ventilated area where the ambient temperature does not exceed 104° F for full load operation. Allow 2" of side clearance for proper air circulation and servicing. Installation clearance shall meet local and/or NEC code requirements. Enclosures may be attached to the wall or other mounting surface by holes in the heat sink flanges. Refer to the drawings below (FIGURE 6) for the correct dimensions. Conduit shall be pulled to the top of the dimmer packs.

Figure 7 - PP405-DMX-24DC GENERAL WIRING INSTRUCTIONS:

<u>Wiring Notes</u>

D DO NOT EXCEED 120W @ 24 VDC or 60 W @ 12 VDC (5 Amps.) per dimmer output

- All wiring between the controller and other dimmers (DATA bus) is low voltage (NEMA Class 2) and may be run with One, twisted pair, shielded #22 AWG wire.
- **PP405-**DMXdimmer Modules may be fed by 4 Class 2 Power supplies
- **CAUTION: DO NOT** attempt to parallel outputs to increase capacity.
- h Installation must conform to local and/or NEC code requirements and must be performed by a qualified electrician.

DMX Address Setting

Up to 128 PP405-DMX dimmer packs may be installed per system and their DMX input daisy-chained using standard DMX-512 cables. Different addresses ranging from 1 to 509 may be selected for each dimmer, depending on which DMX channel(s) will be used to control it. Each dimmer pack uses four consecutive DMX bytes from the input stream beginning at the address selected using rotary selectors S1, S2 and address expansion jumper S3. (See Figure 3 on page 2 for selectors location).

The PP405-DMX is shipped from the factory with jumper S3 installed allowing a DMX address range between 1 and 256 to be selected by S1 & S2 (See Table 4). For higher addresses (257-509) jumper S3 must be removed (See Table 5).

Non-Dim Output Setting

Any or all of the PP405-DMX outputs may be configured for non-dim (switch only) operation. This prevents inadvertent dimming, or damage, of loads that cannot be dimmed, such as contactors, mechanical relays, motors, non-dim fluorescent, etc...

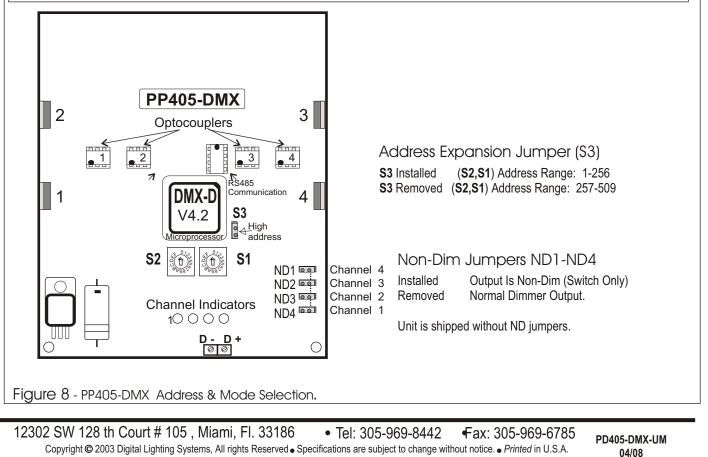

Since this procedure involves adding external wire jumpers to the INT4 board, it is preferable to have it performed by the factory, at time of order. However, a qualified electronic technician can perform the procedure in the field when necessary. Figure 8 shows the location for installing the non-dim (ND) jumpers.

The numbers shown next to the ND jumpers represent the corresponding output number of the PP405-DMX. Installing an ND jumper makes the corresponding output non-dim (switch only). A DMX value greater than 3 turns a non-dim output to full intensity. A DMX value of 3 or less turns it fully off.

BEFORE ENERGIZING THE PP405-DMX MAKE SURE:

- Loads are tested before connecting to dimmers.
- □ PP405-DMX has been properly grounded.
- All line voltage screw terminals are properly tightened to prevent hot spots.
- Low voltage data lines connections are properly insulated.
- Low voltage data lines polarity is observed throughout the system.
- The PP405-DMX is set to the right address.

LIMITED WARRANTY

Digital Lighting Systems, warrants to the purchaser that its products have been carefully manufactured and inspected and are warranted to be free from defects of workmanship and materials when used as intended. Any abuse or misuse contrary to normal operation shall void this warranty.

Digital Lighting Systems' obligation under this warranty shall be limited to replacement or repair of any units as shall within two years of date of invoice from **Digital Lighting Systems**, prove defective; and **Digital Lighting Systems** shall not be liable for any other damages, whether direct or consequential. **The implied warranties of merchantability and fitness for a particular purpose are limited to the duration of the expressed warranty**. Some states do not allow the exclusion of the limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights, you may also have other legal rights which vary from state to state.

Defective merchandise may be returned to **Digital Lighting Systems**, prepaid, after prior notification has been given and approval obtained for the return. To obtain prior approval for the return of the defective items, contact your local Digital Lighting Systems distributor, representative, or:

Digital Lighting Systems, Inc.

Attn: Customer Service Department 12302 Sw 128th ct , #105 Miami, FL 33186 (305)969-8442 Sales@digitallighting.com Upon request, replacement unit(s) will be shipped as soon as available. Unless immediate shipment of replacement merchandise is requested, **Digital Lighting Systems** will not ship replacement merchandise until defective merchandise is received, inspected, and determined to be defective.

No labor charges in connection with warranty problems will be reimbursed by Digital Lighting Systems without prior written approval from the factory.

Digital Lighting Systems distributors and representatives have no authority to change this warranty without written permission.

Digital Lighting Systems reserves the right to determine the best method of correcting warranty problems.
